

Building a Reproducible Scholarly Search Toolkit

Episode 11: Response Normalization Subsystem

Nexus Scholar Suite

Author Splitting

- Unpacks string names into `given_name` and `family_name`.
- Preserves single-name scholars (e.g. "Plato", "Aristotle").
- Captures ORCID identifiers.

Date Normalization

- Parses ISO-8601, RFC-3339, and Crossref date-parts.
- Handles PubMed XML `<PubDate>`.
- Strictly defaults to `None` if year is unknown.

```
@dataclass
class Author:
    family_name: str
    given_name: str | None = None
    orcid: str | None = None

    @property
    def full_name(self) -> str:
        return f"{self.given_name} {self.family_name}" if self.given_name else self.
        family_name
```
